

# Basic organization for Ambush Blitz

V 070719

## The Coy

Your first target when building one Ambush Blitz combat group should be the INF Company. A Coy consists of 3 platoons (units).

If the recommended basing conventions are used, to assemble one Coy you will need 9 stands and 27 figures, including rifles, SMG, LMG and infantry A/T weapons (like an A/T rifle, panzerfaust or bazooka).

Each stand will carry 3 figures, distributed as you see fit.

The 3 stand platoon: the basic infantry unit in the game.

Which kind of figures you use is up to you, but we can suggest, for example:

- 1 low ranking officer/commander
- 1 to 3 SMGs
- 15 to 21 riflemen
- 3 LMGs (3 to 6 figures including loaders)
- 1 A/T weapon (1 or 2 figures)

Total **27** infantry.

It is a good idea to use a corner of the stand to identify the Company. Some players also like to identify which platoon the base or (squad) belongs to.

# Coy Types

In Ambush Blitz there are 3 basic types of Coy: FIF, MIF and AIF.  
To represent which kind of Coy you have during the game just add (or remove) one infantry transport model to each unit (platoon).

MIF platoons are generally carried in trucks.

One AIF platoon, on armored H/T.

One FIF platoon, with a HMG attached.

# Coy Colors

Here we provide basic color suggestions for uniforms, but before going for a new vial check if you have a similar color in your paint box first: in reality the uniform tones varied widely, because of die variations, different tissue manufacturers, washing, sun exposure and aging.

Please note that the tone used could be a bit lighter in the smaller scales, darker and closer to the original in larger scales.

Expert painters usually highlight a dark color by adding white to the base color.

These tables will be completed and improved as more colors are identified.
